District Mohindergarh

Introduction

As a part of overall preparedness of the State the Govt. of Haryana has a State disaster management action plan to support and strengthen the efforts of district administration. In this context every district has evolved its own district disaster management action plan (DDMAP). It is expected that these multi-hazard response plans would increase the effectiveness of administrative intervention.

Multi-disaster Response Plan

The DDMAP addresses the districts' response to disaster situations such as earthquakes, floods, cyclones, epidemics, off-site industrial disasters and roads accidents and fires. Some of these disasters such as floods and earthquakes affect large areas causing extensive damage to life, property and environment while others such as epidemics only affect large populations. In any case, the management of these disasters requires extensive resources and manpower for containment by remedial action.

The present plan is a multi-response plan for the disasters and outlines the institutional framework required for managing such situations. However, the plan assumes a disaster specific form in terms of the actions to be taken by the various agencies involved in the disaster. The front-end or local level of any disaster response organization will differ depending upon the type of disaster, but at the level of the back-end i.e., at the controlling level at the district it will almost remain same for all types of disasters.

Objectives

The objectives of District Action Plan are:-

- . To improve preparedness at the district level, through risk and vulnerability analysis, to disasters and to minimize the impact of disasters in terms of human, physical and material loss.
- . To ascertain the status of existing resources and facilities available with the various agencies involved in the management of disasters in the district and make it an exercise in capability building of district administration. This enables the district to face a disaster in a more effective way and builds confidence across different segments of society. It will be a positive factor for long-term development of the district
- . To utilize different aspects disaster mitigation for development planning as a tool for location and area specific planning for development in the district
- . To use scientific and technological advances in Remote Sensing, GIS etc in preparation of this plan with a view to ensure their continuous use for development planning
- . To develop a framework for proper documentation of future disasters in the district, to have an update on critical information essential to a plan, to critically analyst and appraise responses and to recommend appropriate strategies.
- . To evolve DDMAP as an effective managerial tool within the overall policy framework of Govt. of Haryana.

Response to disasters, in the absence of a defined plan, would be arbitrary leading to overemphasis of some actions and absence of other actions, which could be critical. The objectives of any disaster management plan should be to localize a disaster and to the maximum extent possible contain it so as to minimize the impact on life, the environment and property.

A formal plan for managing disasters is therefore necessary. This would include

- a. Pre-planning a proper sequence of response actions
- b. Allocation of responsibilities to the participating agencies
- c. Developing codes and standard operating procedures for various departments and relief agencies involved
- d. inventory of existing facilities and resources
- e. Mechanisms for effective management of resources
- f. Co-ordination of all relief activities including those of NGOs to ensure a coordinated and effective response.
- g. Co-ordination with the State response machinery for appropriate support.
- h. Monitoring and Evaluation of actions taken during relief and Rehabilitation

“Outline for Vulnerability Assessment”, prepared by CSSD/EMC has been used as the basic instrument to collate district level information to meet the database requirements for the preparation of DDMAP.

Policy Statement

The underlying policy of the DDMAP is to protect life, environment and property while ensuring, mitigation of the disaster to the maximum extent possible, relief to those affected and restoration of normalcy at the earliest.

Essentially, communities draw their support from the social institutions, administrative structure, and values and aspirations they cherish. Disasters may temporarily disorganise the social units and the administrative system and disrupt their lives built around these values and aspirations. A systematic effort to put back the social life on its normal course with necessary technology support and resources will contribute significantly to the resilience of the community and nation.

This policy forms the basis of the DDMAP, It aims at capacity building and prompt utilisation of resources in a disaster situation through a partnership of the Govt. of Haryana, NGOs and private initiatives and the community. In pursuance with this policy, DDMAP addresses itself to strengthening the pre-disaster responses of various actors and stakeholders including the “victims” of the disaster.

History

In 1948, with the formation of PEPSU Mahendergarh territory from Patiala State, Dadri territory (Now Charkhi Dadri) from Jind State and Bawal territory from Nabha State were constituted into Mahendergarh district with the headquarters at Narnaul. At that time, there were three tahsils, namely; Narnaul, Charkhi Dadri and Bawal and Mahendergarh was a sub-tahsil. In 1949, Mahendergarh sub-tahsil was made a tahsil. In 1950, Bawal tahsil was broken up and 78 villages were transferred to Gurgaon district forming Bawal as a sub-tahsil and remaining villages were added to Narnaul and Mahendergarh. Since the merge of PEPSU with Punjab in 1956, the Mahendergarh district became one of the 19 districts of the then Punjab.

The Total area of the district is 194160 Hectare and total population as regards 2001 census is 812022 which has been increased round above 19.9%. The total village falls in this district are 372 it consist two sub Divisions two Tehsils and three Sub Tehsils. There are eight police station and five blocks in this district. This district is situated in South corner of the State. The boundary of this district touches the boundary of other district of Haryana like Bhiwani, Rewari, Jhajjar and the boundary of Rajsthan States Alwar, Sikar, Jaipur and Jhunjhunu. As the agriculture land of this district is sandy. The main crops are Bajara, Jawar, Gram. Due to sandy land the rainy water could not stay for a long time. The ground water level of this district is very low. So. People has to face drinking water problem. The farmers have to face a great problem to produce wheat due to lack of water. The main occupation of the district is agriculture.

FLOODS

There are two seasonal rivers of this district are namely The Krishnawati and The Dohan Theses rivers enter in district Mohindergarh from Rajasthan State. Now Rajasthan State has constructed Dams on these rivers. So there are less possibility of over flow of water in these rives. In view of the past experience and the prevailing condition of this district. There is no problem of flood in District Mohindergarh rather under ground water level has gone down every because insufficient rain in rainy season for the last many years. How ever arrangements are proposed to be under taken regarding, flood protection joint Inspection of flood protection works are made every year.
